PROFILE

Reliability-focused software engineer who built a 113-repository ecosystem for ORGANVM governed by self-healing state machines and 700+ verification tests. Expert in building the guardrails that make high-velocity iteration safe across the entire stack. Specializes in cross-repo protocol parity, automated coherence audits, and real-time state consistency. Treats reliability as an engineering-first problem, writing code to eliminate toil and build the observability that prevents systemic regressions. Full-Stack Developer (Meta).
