SELECTED PROJECTS

Application Pipeline — Customer-Facing Data Governance System
Python CLI suite with 9-state machine, schema validation, multi-dimensional scoring rubric, audit trails, signal-action logs, and external API integrations (BLS, Greenhouse, GitHub). Built to serve as both operational tool and documentation corpus for iterative refinement.

ORGANVM Eight-Organ System — 113-Repository Documentation Architecture
8 GitHub organizations, 82K files, 739K words of governed documentation, 23,470 tests, 104 CI/CD pipelines. CLAUDE.md governance contracts in every repo enforce schema compliance and narrative consistency. Designed for teams, not just authors.

agent--claude-smith — Claude Agent SDK Integration
TypeScript agent with session persistence, self-correction hooks, and structured tool invocation. Demonstrates forward-deployed pattern: embeds AI capability into existing workflows with minimal friction and clear handoff documentation.

agentic-titan — Multi-Agent Orchestration System
TypeScript multi-agent framework: 18 development phases, 1,276 tests. Structured task decomposition, parallel execution, and agent coordination with explicit interface contracts designed for customer-configurable deployment.

Portfolio — Astro 5 Site with 20 Case Studies
20 technical case studies translating complex engineering work into scannable narratives. Pagefind search, D3.js data visualizations, quality ratchet CI/CD governance. Built to communicate systems work to non-technical stakeholders.
