SELECTED PROJECTS

ORGANVM Eight-Organ System — 113-Repository Systems Infrastructure
8 GitHub organizations, 22 languages including Go, 82K files, 23,470 tests, 104 CI/CD pipelines. Automated dependency validation enforcing 50 cross-org edges. Promotion state machine with forward-only transitions, schema contracts, and governance rules. Security-adjacent: STRIDE/XSS/SQLi content in CI-validated documentation.

Application Pipeline — CLI Tooling Suite with Security Hygiene
Python CLI tools: 14+ scripts with shared library, schema validation, audit trails, secret management (never-committed config files), IMAP integration, ATS API clients using stdlib. Security-first design: explicit input validation, fail-fast on bad data, no credentials in codebase.

agentic-titan — Multi-Agent Orchestration System
TypeScript multi-agent framework: 18 development phases, 1,276 tests. Structured task decomposition, parallel execution, and explicit interface contracts. Correctness-first design with comprehensive test coverage for edge cases and failure modes.

agent--claude-smith — Claude Agent SDK Integration
TypeScript agent with session persistence, self-correction hooks, and structured tool invocation. Systems-level design: durable state tracking, explicit handoff protocols, and failure-mode documentation.

Portfolio — Astro 5 Static Site with Quality Governance
Production Astro 5 site: generative p5.js canvas, D3.js visualizations, Pagefind search, 20 case studies. CI/CD quality ratchet with committed policy contracts and strict test gates enforced on every deploy.
