PROFILE

Test infrastructure architect with 3.6K tests across 103 repositories and 94 CI/CD pipelines spanning 8 GitHub organizations. Builds agentic orchestration systems and automated validation frameworks in Python and TypeScript — including a 1,276-test multi-agent platform and a CLI tooling suite with schema validation, scoring engines, and submission preflight gates. Practitioner of an AI-conductor methodology: human intelligence directing AI-generated volume through structured review and automated quality gates. Full-Stack Developer (Meta).

SELECTED PROJECTS

agentic-titan — Multi-Agent Test Orchestration System
TypeScript multi-agent framework: 18 development phases, 1,276 tests. Agent coordination with task decomposition, parallel execution, and self-correction patterns. Structured for extensibility, reliability, and automated test validation at every phase gate.

ORGANVM Eight-Organ System — 103-Repository Test Infrastructure
8 GitHub organizations, 21K code files, 3.6K tests, 94 CI/CD pipelines. 128 GitHub Actions workflows (18 reusable templates). Automated dependency validation, promotion state machine (LOCAL → CANDIDATE → PUBLIC → GRADUATED), CLAUDE.md governance in every repo. Cross-org test coordination. TypeScript + Python.

Application Pipeline — Validation & Scoring Engine
Python CLI tools: 9-dimension scoring rubric, YAML schema validation, pipeline state machine with forward-only progression enforcement, submission preflight gates, batch enrichment, conversion funnel analytics. 14 independent scripts sharing a common library with 1,977 tests.

agent--claude-smith — Claude Agent SDK Integration
TypeScript agent built on Claude Agent SDK with session persistence, self-correction hooks, and structured tool invocation. Designed for autonomous multi-step software engineering tasks with automated test generation and validation loops.

Portfolio — Astro 5 Static Site with Quality Ratchet CI
Generative p5.js visual layer, D3.js data visualizations, Pagefind search, 20 case studies. CI/CD with quality ratchet governance: policy JSONs enforcing test coverage and build-output validation gates.
